

CONGRESSMAN JOHN SALAZAR ON WOLF CREEK:  
"A PROJECT OF THIS SCOPE AND SIZE CANNOT CONTINUE"

WASHINGTON, DC - Congressman John T. Salazar today released the following statement in response to information provided by the Forest Service about the scope and impact of the proposed Village at Wolf Creek development.

Said Salazar: "At the end of the day, I just don't see how a project of this scope and size can continue.

"I've taken the time to meet with the involved parties, ask questions, and gather information about the proposed development. With the Forest Service's latest answers, it has become even clearer the proposal would require many special concessions, without the promise of any real gain for the greater community.

"Instead, the development brings the threat of dangerous roads, contaminated water, and harm to the very wildlife and landscape that makes this area so unique. I will not support a project that hurts the community I represent."

In recent months, Salazar has met with representatives of the Wolf Creek Ski Area, the Village at Wolf Creek developers, and the Forest Service. Salazar asked the Forest Service to provide formal answers to several questions, including plans to address transportation, water, and energy development concerns.

The Forest Service's complete answers to Congressman Salazar are not attached to this email due to their large size (1 MB). They are available upon request. Please reply to this email and place "Wolf Creek Answers" in the subject line and they will be sent to you.
